**Project Description:** The Very High Frequency Omni-Directional Radio Range (VOR) is a ground-based electronic system that provides assistance with aircraft navigation. The old VOR has been removed and a new, upgraded, VOR is being constructed.

**Project Updates:**
- Construction Completion: 77%
- Scheduled Completion: September 2015
- Antenna ring, antenna mounting plates, and the ground loops around the two tower foundations have been installed.
- Air conditioning units, welding of the counterpoise grating and conduits are currently being worked on.
- Equipment racks and antennas will be installed in a few weeks.
